

## Google Greetings

*August '13*

With an attempt to bring out the latest technologies and gear up students for the odd semester of 2013, the team of Google Developers Group JIIT conducted its first session for the semester- "Google Greetings". With discussions ranging from topics such as the Zygote Body to the Google Car, and from Dart to Google Motion, the exhilarating response of 320+ students was a clear indicator of the event's success.

The team was equally enthusiastic to work with the eager students, into spreading the word of Google's phenomenal works. This event also marked the team's release of its first newsletter, "Tech Talisman". It's worth mentioning that the overwhelmed newcomers- the first year students were given an instant platform to embrace the tech savvy in them.

## Make it Or Break It: PHP

*September '13*

In its tech-season called the "Google Gala", the Google Developer's Group JIIT conducted a 3-hours long, hands-on workshop on PHP, in the month of September. This highlight event was designed to guide 3rd year students in their effort to create their own websites for their minor project. The event comprised of over 100 enthusiastic learners, who saw the implementation of PHP using a local hosting server, the essence of data crawling, RSS feeds, galleries, login forms and the integration of AJAX methods, with the help of jquery and javascript. Overall, the event was a great success, accompanied by an extended provision of study material, to help achieve the goal of "making it with PHP".
