OBSTETRICS REPORT 1 of 1 visit(s)

Date: 04/01/2013

**Anatomy - Continued:**

RVOT: Visualized  
LVOT: Visualized  
Aortic Arch: Visualized

Lower Extremities: Visualized  
Upper Extremities: Visualized

**Cervix/Uterus/Adnexa:**

Cervix: (By Transvaginal Sono) cm, see comments  
Left Ovary: 2.3x2.3x2.0cm  
Right Ovary: 3.1x1.5x2.3cm

**Comments:**

Transvaginal sonogram was performed to more accurately assess the cervical length. The cervix is open 4.0cm with membranes bulging past the exocervix. Evaluation of the fetal spine is limited due to the fetal position. No gross fetal structural abnormalities are noted at this time. Chromosomal defects cannot be excluded by ultrasound. Amniocentesis Procedure: The abdomen was cleansed with betadine solution. Amniocentesis was performed under continuous ultrasound guidance using a 20 gauge spinal needle. Eighty milliliters of clear amniotic fluid was aspirated and submitted for cytogenetic and AFP studies and chemistry, cell count and culture. Fetal cardiac motion was observed pre and post amniocentesis. The procedure was performed by Dr. McCalla. The patient's blood type is Rh positive.

Thank you for sharing with us in the care of Ms. ESMA FIDAN. Please do not hesitate to call us if you have any questions.

 Date Received: 02/13/2013  
 GA: 12.0 weeks

## Second Trimester Serum

Specimen #: 19387726-6  
 Date Collected: 03/13/2013  
 Date Received: 03/15/2013  
 GA: 16.3 weeks

<b>Results:</b>	<b>NT</b>	<b>PAPP-A</b>	<b>AFP</b>	<b>HCG</b>	<b>UE3</b>	<b>Inhibin</b>
	1.09 MoM	2.99 MoM	1.24 MoM	2.89 MoM	0.78 MoM	1.50 MoM
<b>MoM Cutoff:</b>			<2.50			

**INTERPRETATION : Screen Negative**

	Screening Risk	Age Related Risk	Risk Cutoff
Down Syndrome	1:3,000	1:200	1:270
Trisomy 18	1:10,000	1:770	1:100
ONTD	1:2,900	N/A	1:145

SequentialScreen detects approximately 90% of Down Syndrome and approximately 90% of Trisomy 18 fetuses. This test does not reliably detect other chromosomal abnormalities.

A negative NTD screen rules out approximately 80% of open neural tube defects. This screen does not detect closed or very small neural tube defects.

Maternal screening has some level of inherent false negative and false positive results and is not a substitute for diagnostic testing. It remains standard of care to offer prenatal diagnosis to women age 35 or older at term.

Please check the patient information used in this risk assessment and call with any corrections.

**Results:** Nuchal Translucency PAPP-A hCG  
 1.09 MoM 2.99 MoM 2.65 MoM

**INTERPRETATION : Final result pending second trimester sample**  
**Optimal draw dates: 03/11/2013 - 03/25/2013**

	Screening Risk	Age Related Risk	Risk Cutoff
Down Syndrome	1:710	1:140	1:50
Trisomy 18	1:10,000	1:510	1:100

The second trimester specimen may be collected between 15 and 21 weeks GA. This patient's optimal date range (16-18 weeks gestation) is noted above. This test does not reliably detect other chromosomal abnormalities.

Risk assessment for open neural tube defects (CNTD) is not available in the first trimester.

Maternal screening has some level of inherent false negative and false positive results and is not a substitute for diagnostic testing. It remains standard of care to offer prenatal diagnosis to women age 35 or older at term.

Please check the patient information used in this risk assessment and call with any corrections.
