

INTRODUCTION

We're going to be creating a website that almost INTERACTS with a different, already popular website. There are two different versions of this method, one Black Hat and one White Hat. I'll be focusing on the White Hat version for most of this eBook, but I'll also explain the Black Hat version at the end.

LINKS

You're going to need some stuff for this method... here's the links to the stuff you need!

You will be buying a domain. Here are 3 good places to get them:

www.godaddy.com

www.networksolutions.com

www.namecheap.com

You will be buying hosting. Hostgator has always been the best in my opinion. They are crazy cheap, and offer great customer support. They are also very noob friendly. Go to www.hostgator.com (not an affiliate link). Use the coupon **only1penny** to get the "hatchling" plan for only \$0.01 on the first month! (Or \$9.94 off any other plan).

Now... let's get started with the White Hat version of this method...

WHITE HAT

Find a big website and find a feature everybody is asking for. You'd be surprised, even the biggest websites lack some very basic features. Youtube currently gets over 6 billion hits a day, but it still lacks the following...

A button to download the video you're watching.

A way to set a video to "replay". Ideal for music videos etc...

A way to "dim the lights". (Make everything around the video go dark).

There's lots of software/websites that offer these features, especially the "download" feature. But no one wants to download and set up your software, nor do they want to navigate away from the video they're watching to find your website.

So what if we could simply EMBED our website that offers one of these features next to every Youtube video? Obviously that's impossible, but there's a very sneaky way to almost do the exact same thing.

Pretend you want to offer the "dim the lights" feature. You would get a domain EXACTLY like youtube.com but with something before/after it. Both [dimyoutube.com](#) and [youtubedim.com](#) would work. Just make sure that whatever extra word you're adding is either at the very front or very end of the domain.

Let's pretend you got [dimyoutube.com](#). Now set it up so if someone goes to [dimyoutube.com/anything](#) it automatically embeds the video on [youtube.com/anything](#) but with a black background. It would look even nicer if you

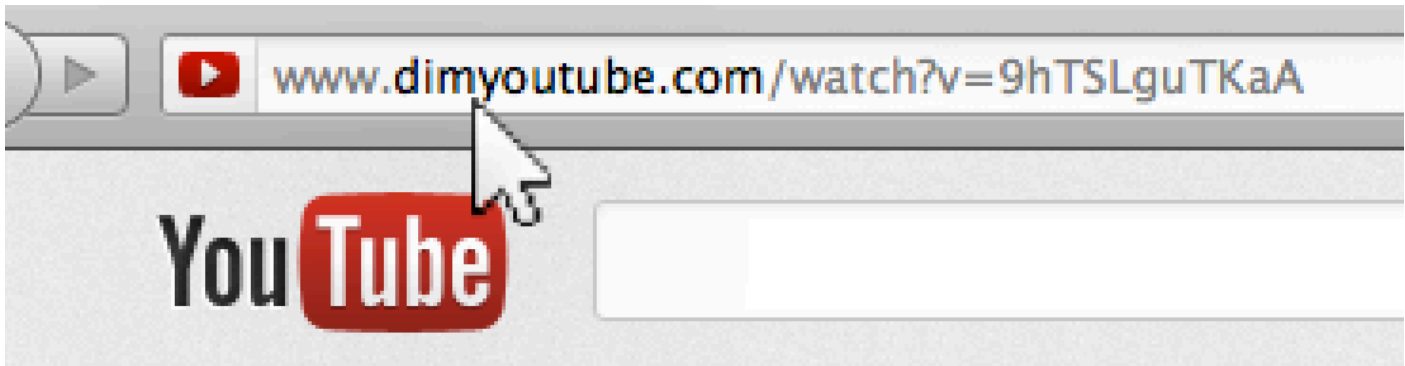

got it to iFrame youtube.com/anything, but with a semi transparent layer of black slowly appearing around the video (to give the impression of the lights being dimmed). If you don't know how to do this, you can get someone on freelancer.com to do it for \$25.

Do you see what we did there? Now if someone's watching a video, all they have to do is type "dim" in the address bar and hit enter. Now the lights will dim around their video.

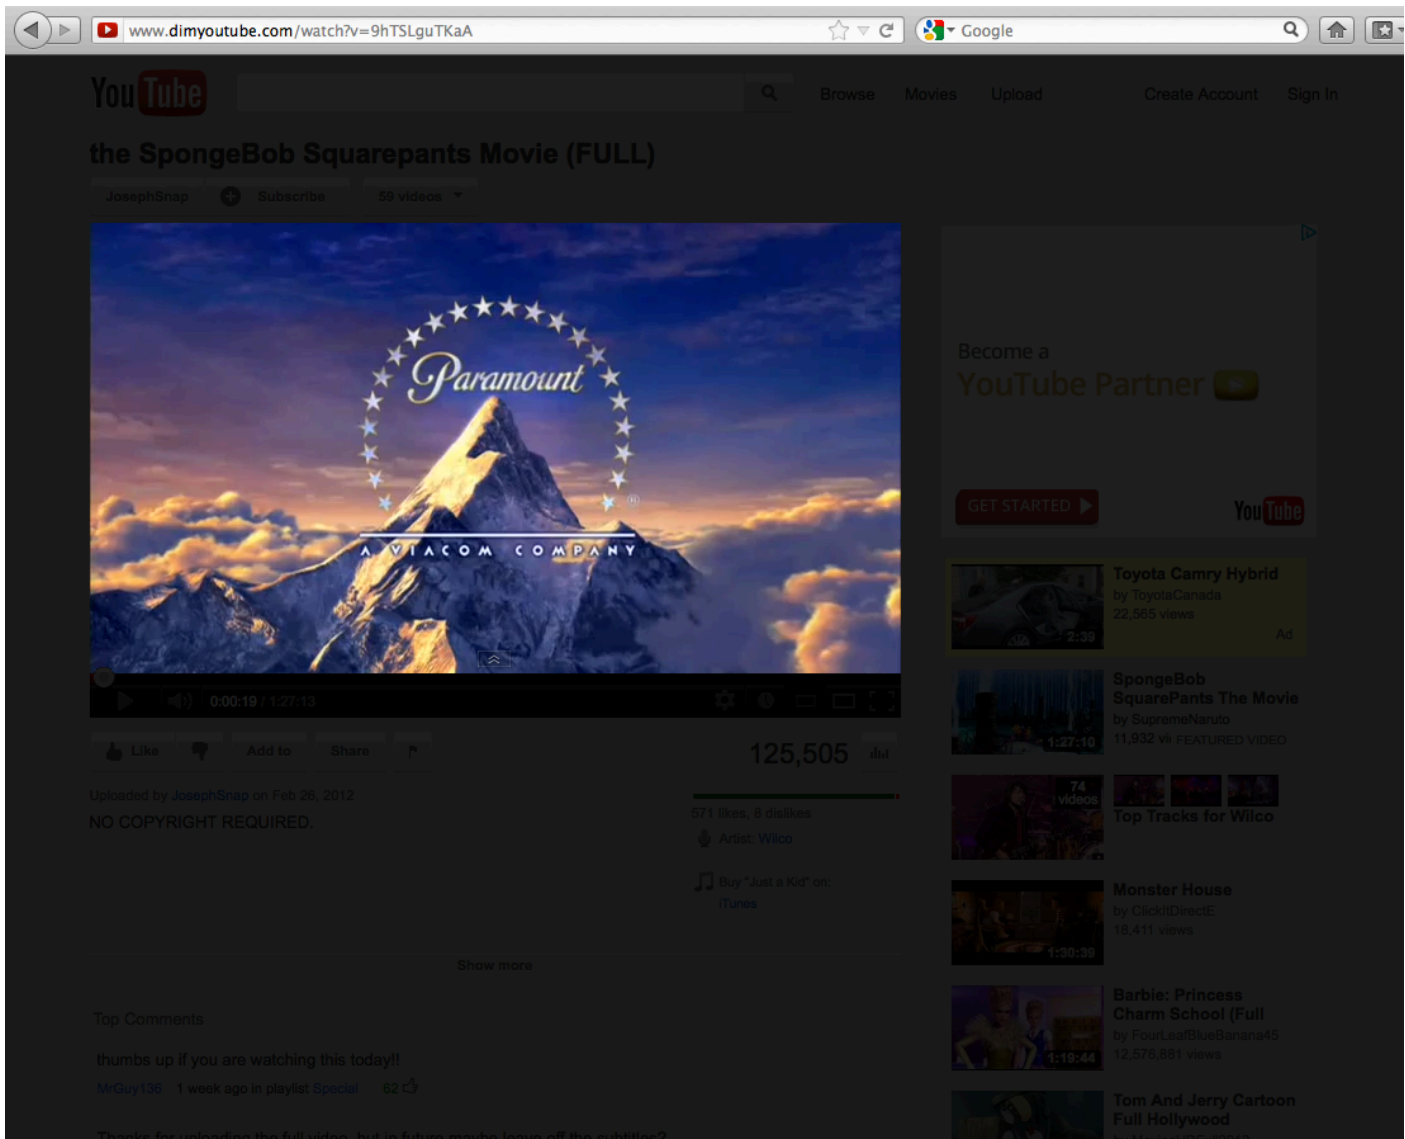

1.

The screenshot shows a web browser window displaying a YouTube video. The address bar shows the URL `www.youtube.com/watch?v=9hTSLguTKaA`. The YouTube interface includes the logo, a search bar, and navigation links like 'Browse', 'Movies', 'Upload', 'Create Account', and 'Sign In'. The video title is 'the SpongeBob Squarepants Movie (FULL)' by 'JosephSnap', who has 59 videos. The video player shows the Paramount logo over a mountain scene. Below the player, there are like/dislike buttons, an 'Add to' button, a 'Share' button, and a view count of 125,505. The video was uploaded on Feb 26, 2012, and is marked 'NO COPYRIGHT REQUIRED.'. To the right of the video, there are recommendations for other videos, including 'Toyota Camry Hybrid', 'SpongeBob SquarePants The Movie', 'Top Tracks for Wilco', 'Monster House', 'Barbie: Princess Charm School (Full)', and 'Tom And Jerry Cartoon Full Hollywood'. A 'Become a YouTube Partner' banner is also visible.

2.

3.

The great thing is, this doesn't necessarily require any SEO. If you're using a social website with this method (I recommend this), the word will get around FAST! And you don't need to worry about people finding your website from google, all your traffic will come from people typing in your URL.

Eventually, whenever someone is watching a movie on Youtube, they will enter dimyoutube.com without even thinking about it. Now to profit off this...

Place your ads OVER TOP of the original website's ads, and add your own in places it doesn't cover anything.

For the user, they're just typing something in and the screen goes dark for their movie... But really they're going to a whole new website, with YOUR ads! They are no longer on Youtube.com and Youtube is no longer making the profit, YOU ARE!

***Note**

At the time this eBook is being written, dimyoutube.com is NOT taken. If you're fast enough, you can make the exact website I was using for an example! But don't worry if it's gone. There are so many different websites/features you can offer... the possibilities are unlimited. Think of your own :)

BLACK HAT

This is for information purposes only. This is illegal!!! DO NOT DO THIS!

You need a website that sells something. For this eBook we'll use WarriorForum.com for an example. We'll be giving away their WSO's for free (Warrior Special Offers). The setup is just like the White Hat version. Get a domain like **freewarriorforum.com**. Install Wordpress since we're not going to be doing anything advanced. Since WSO's URL's are in this format:

<http://www.warriorforum.com/warrior-special-offers-forum/RANDOM-TEXT.html>

You want to make a category called "[warrior-special-offers-forum](#)". Set that as the default category. Now go to your permalink settings, choose 'Custom Structure' and set it to [/%category%//%postname%.html/](#) (you can just copy paste that).

Now the URL of your posts will be

freewarriorforum.com/warrior-special-offers-forum/WHATEVER-YOU-WANT.html

So now go online and find free copies of popular WSO's, and share them on your website. Make sure for each post you set **WHATEVER-YOU-WANT** to the **RANDOM-TEXT** of the WSO you're giving away.

And, just like the White Hat version, now whenever someone is looking at a WSO, all they have to do is type "free" at the beginning of the URL, and hit enter. Now they're at your website (try to keep it clean and simple) with the download link.

There are many PPD options to make money from downloads on your website...

WITH SURVEYS:

I suggest using www.cpalead.com

WITHOUT SURVEYS:

I suggest using <http://fileuplo.de/help/about>

No, those aren't my affiliate links. I just know that they're good.
